**Innovative Sun® Fluid Xchanger
Provides 2-in-1 Transmission, Power Steering Fluid Service Solution
for Shops to Increase Capabilities, Volume, Profitability**

Mississauga, Ontario, March 25, 2002 — Snap-on and Snap-on/Sun Equipment Systems have introduced a new, innovative 2-in-1 fluid exchange unit that quickly exchanges both transmission and power steering fluids, and pioneers easy-to-use, flush-and-fill technology for power steering service.

The Sun® EETF103A MFX Xtreme Fluid Xchanger is one of the first products in the industry to offer quick, clean and efficient power steering fluid-exchange capabilities. The unit replaces up to 95 per cent of power steering fluid in 8 minutes or less. Technicians control the exchange via a remote pendant control. New fluid bottles are placed in a special loading compartment to begin the exchange. After extracting the old fluid from the vehicle, the unit drains directly to its onboard waste tank.

The fast, versatile EETF103A also uses advanced features to exchange nearly all types of automatic transmission fluid in 15 minutes or less. The unit connects directly to transmission cooler lines through vehicle-specific adapter hoses that are easy to attach. Using the hoses, technicians can service vehicles without a pit, lift or ramp.

The versatile EETF103A Sun® EETF103A MFX Xtreme Fluid Xchanger services most makes of domestic and import cars and light trucks. With its 2-in-1 capabilities, the EETF103A is designed as a solution to help fast-lube franchises, independent shops and auto dealerships expand their service capabilities and increase their profitability with a single, all-in-one efficient fluid exchange unit. It is also a solution to help fleet-maintenance facilities service fleet vehicles more efficiently and cost-effectively.
